

ICR1000-AU Digital Voice Recorder

The ICR 1000 is designed to record dictation, meetings and conferences with exceptional high quality. Both models combine the familiar and easy operation of a traditional tape based dictation machine with the advanced features and versatility of a digital device. The voice files can be downloaded to a PC and emailed for storage, and editing using the optional FS-USB2 transcription Kit.

The voice activated recording system is backed up by a USB download capability and sockets are included for additional external microphones and headphones. Download is simple with the USB cable provided - also use as a portable shortage device. The stylish LCD display is complemented by the front and side control buttons and with a depth of only 17mm, these ultra compact recorders have a wealth of features contained within its smooth lines, making it an extremely attractive addition to the digital recording market in more ways than one.
